th henning and b stecklum university observatory jena this workshop was organized by the university observatory jena and devoted to the physics and chemistry of dense regions of interstellar matter it was especially dealing with the properties of interstellar dust grains and star formation in those regions this field of research was opened in jena already in the 1950s and an early fa u colloquium on the topic of interstellar matter was held here in 1969 since that time the subject of interstellar matter has grown into a much more important part of astrophysics than it was in 1969 now we are beginning to understand the process of star formation in a greater detail the discovery of many interstellar molecules by radioastronomers opened the new field of interstellar chemistry in addition the application of the new techniques of infrared astronomy led to the discovery of several absorption bands e g the 3 1 11m ice band which pointed to the existence of grain mantles more recently the detection of infrared emission lines was the first hint to the existence of a new component of interstellar matter all these things were discussed extensively during the workshop the very successful iras mission which was also a subject of this workshop gave us many new insights and unexpected findings e g the detection of infrared cirrus clouds

this book was written by a team of leading gear experts from across the globe including contributions from usa germany poland china russia ukraine and belarus it provides readers with the latest accomplishments in the gear theory and gear cutting tool design specialists

can apply competencies gained from this book to quality control in gear manufacture as well as to the conditions of their production the book begins with a detailed discussion of the kinematics and geometry of geometrically accurate gears and gear systems this is followed by an analysis of state of the art gear manufacturing methods with focus on gear finishing operations novel designs of gear transmission systems as well as gear theory and gear cutting tool design are also covered

this book is about how to develop future automotive products by applying the latest methodologies based on a systems engineering approach and by taking into account many issues facing the auto industry such as meeting government safety emissions and fuel economy regulations incorporating advances in new technology applications in structural materials power trains vehicle lighting systems displays and telematics and satisfying the very demanding customer it is financially disastrous for any automotive company to create a vehicle that very few people want to design an automotive product that will be successful in the marketplace requires carefully orchestrated teamwork of experts from many disciplines substantial amount of resources and application of proven techniques at the right time during the product development process automotive product development a systems engineering implementation is intended for company management personnel and graduate students in engineering business management and other disciplines associated with the development of automotive and other complex products
