utopias and the environment explores the way in which the kind of dreaming or re visioning known as the utopian imaginary takes environmental concerns into account this kind of creative intervention is increasingly important in an era of ecological crisis as we witness the failure of governments worldwide to significantly change industrial civilization from a path of business as usual in this context it is up to the artists in this case authors to imagine new ways of being that respond to this imperative and immediate global issue concurrently it is also up to critics readers and thinkers everywhere to appraise these narratives of possibility for their complexities and internal conflicts as well as for their promise as we enter this new era of rapid change and adaptation because creative and critical thinkers must work together towards this goal the idea of the critical utopia coined by tom moylan in response to the fiction of the 1970s is now ingrained in the common argot and is one of the key ideas discussed in this book this development

in the genre which combines self reflexivity and multiple perspectives within its dreaming represents the postmodern spirit in its most regenerative aspect this book is testament to such hopes and potential realities this book was originally published as a special issue of green letters

this volume presents a variety of perspectives from within and outside moral psychology recently there has been an explosion of research in moral psychology but it is one of the subfields most in need of bridge building both within and across areas interests in moral phenomena have spawned several separate lines of research that appear to address similar concerns from a variety of perspectives the contributions to this volume examine key theoretical and empirical issues these perspectives share that connect these issues with the broader base of theory and research in social and cognitive psychology the first two chapters discuss the role of mental representation in moral judgment and reasoning sloman fernbach and ewing argue that causal models are the canonical representational medium underlying moral reasoning and mikhail offers an account that makes use of linguistic structures and implicates legal concepts bilz and nadler follow with a discussion of the ways in which laws which are typically construed in terms of affecting behavior exert an influence on moral attitudes cognition and emotions baron and ritov follow with a discussion of how people s moral cognition is often driven by law like rules that forbid actions and suggest that value driven judgment is relatively less concerned by the consequences of those actions than some normative standards would prescribe iliev et al argue that moral cognition makes use of both rules and consequences and review a number of laboratory studies that suggest that values influence what captures our attention and that attention is a powerful determinant of judgment and preference ginges follows with a discussion of how these value related processes influence cognition and behavior outside the laboratory in high stakes real world conflicts two subsequent chapters discuss further building blocks of moral cognition lapsley and narvaez discuss the development of moral characters in children and reyna and casillas offer a memory based account of moral reasoning backed up by developmental evidence their theoretical framework is also very relevant to the phenomena discussed in the sloman et al baron and

ritov and iliev et al chapters the final three chapters are centrally focused on the interplay of hot and cold cognition they examine the relationship between recent empirical findings in moral psychology and accounts that rely on concepts and distinctions borrowed from normative ethics and decision theory connolly and hardman focus on bridge building between contemporary discussions in the judgment and decision making and moral judgment literatures offering several useful methodological and theoretical critiques ditto pizarro and tannenbaum argue that some forms of moral judgment that appear objective and absolute on the surface are at bottom more about motivated reasoning in service of some desired conclusion finally bauman and skitka argue that moral relevance is in the eye of the perceiver and emphasize an empirical approach to identifying whether people perceive a given judgment as moral or non moral they describe a number of behavioral implications of people s reported perception that a judgment or choice is a moral one and in doing so they suggest that the way in which researchers carve out the moral domain a priori might be dubious

industrial production and consumption patterns rely heavily on the intensive use of both renewable and non renewable resources and the consequences for the environment can be serious following a long period of time where the profit incentives of firms have prevailed over preservation of the environment and the world s natural resources a new consensus has emerged concerning the need to regulate firm behaviour aimed at ensuring the sustainability of the economic system in the long run this book offers an exhaustive overview of current economic debate about these topics taking modern oligopoly theory as a benchmark the first part of the book covers static models dealing with incentives for green research and development pigovian taxation cartels environmental quality and international trade as well as the role of corporate social responsibility public firms and consumer environmental awareness as endogenous regulatory instruments then the author moves on to examine the role of time while drawing from optimal control and differential game theory this opens the way to the discussion of fair discount rates to ensure the welfare of future generations as well as the long run sustainability of production and consumption patterns
