this text explores the art of decision making both in life and in professional settings by exploring themes such as dealing with uncertainty and understanding the distinction between a decision and its outcome the first edition teaches students to achieve clarity of action in any situation the book treats decision making as an evolutionary process from a scientific standpoint strategic decision making analysis is presented as a tool to help students understand discuss and settle on important life choices through this text students will understand the specific thought process that occurs behind approaching any decision to make easier and better life choices for themselves

a central problem of prescriptive decision making is the mismatch between the elegant formal models of decision theory and the less elegant informal thinking of decision makers especially when dealing with ill structured situations this problem has been a central concern of the authors and their colleagues over the past two decades they have wisely to my mind realized that any viable solution must be informed by a deep understanding of both the structural properties of alternative formalisms and the cognitive demands that they impose on decision makers considering the two in parallel reduces the risk of forcing decision makers to say things and endorse models that they do not really understand it opens the door for creative solutions incorporating insights from both decision theory and cognitive psychology it is this opportunity that the authors have so ably exploited in this important book under the pressures of an interview situation people will often answer a question that is put to them thus they may be willing to provide a decision consultant with probability and utility assessments for all manner of things however if they

do not fully understand the implications of what they are saying and the use to which it will be put then they cannot maintain cognitive mastery of the decision models intended to represent their beliefs and interests

provides an introduction to decision analysis this book is based upon a number of papers and articles taken from the operational research society's journal and other publications however the book is not simply a collection of reprints professor french has provided extensive notes and commentary to weave the extracts into a coherent whole although techniques are presented the main thrust is to convey the purpose of decision analysis and the interpretation that should be placed upon its output vital topics but ones seldom discussed in introductory texts the writing is aimed at the non technical reader

decision theory and decision analysis trends and challenges is divided into three parts the first part overviews provides state of the art surveys of various aspects of decision analysis and utility theory the second part theory and foundations includes theoretical contributions on decision making under uncertainty partial beliefs and preferences the third section applications reflects the real possibilities of recent theoretical developments such as non expected utility theories multicriteria decision techniques and how these improve our understanding of other areas including artificial intelligence economics and environmental studies

the present book finds its roots in the international conference on methods and applications of multiple criteria decision making held in marseille in may 1997 a small number of contributions to that conference were selected via a refereeing procedure and retained authors were requested to include in their final version their more recent results this explains why some papers differ significantly from the original presentation the introductory paper of raynaud addresses the long range forecasts in multiple criteria decision making on the basis of a delphi process that was run before and during the congress in a second part the french author explains how he and some of his partners could find the proof of an important conjecture the iteration of a strongly monotonic choice function is not a strongly monotonic ranking function the second part of the book covers methodological aspects of decision theory the contribution of bouyssou and pirlot concerns the reformulation of classical conjoint measurement models that induce a complete and transitive preference binary relation on the set of alternatives which seem to be unrealistic when decision makers are asked to compare objects evaluated on several attributes the authors propose to consider non transitive non complete and non additive decomposable conjoint models they define properties that characterize such models
