consequences of ignoring the same this book is aimed at civil and mechanical engineering professionals connected with fabrication and erection of railway steel structures

this book contains the proceedings of the additive manufacturing in product development conference the content focus on how to support real world value chains by developing additive manufactured series products

this is a theoretical and practical guide for fatigue design of marine structures including sailing ships and offshore oil structures

corrosion and corrosion protection of wind power structures in marine environments volume 2 corrosion protection measures offers the first comprehensive review on corrosion and corrosion protection of offshore wind power structures the book extensively discusses corrosion phenomena and corrosion types in different marine corrosion zones including the modeling of corrosion processes and interactions between corrosion and structural stability the book addresses important design issues namely materials selection relevant to their performance in marine environments corrosion allowance and constructive design active and passive corrosion protection measures are emphasized with special sections on cathodic corrosion protection and the use of protective coatings seawater related issues associated with cathodic protection such as calcareous deposit formation hydrogen formation and fouling are discussed with respect to protective coatings the book considers for the first time complete loading scenarios including corrosive loads mechanical loads and special loads and covers a wide range of coating materials problems associated with fouling and bacterial induced corrosion are extensively reviewed the book closes with a chapter on recent developments in maintenance strategies inspection techniques and repair technologies the book will be of special interest to materials scientists materials developers corrosion engineers maintenance engineers civil engineers steel work designers mechanical engineers marine engineers chemists and coating specialists offshore wind power is an emerging renewable technology and a key factor for a cleaner environment offshore wind power structures are situated in a demanding and challenging marine environment the structures are loaded in a complex way including mechanical loads and corrosive loads corrosion is one of the major limiting factors to the reliability and performance of the technology maintenance and repair of corrosion protection systems are particularly laborious and costly explores the literature between 1950 and 2020 and contains over 2000 references offers the most complete monograph on the issue covers all aspects of corrosion protection in detail including coatings cathodic protection corrosion allowance constructive design as well as maintenance and repair delivers the most complete review on corrosion of metals in

marine offshore environments focuses on all aspects of offshore wind power structures namely foundations towers internal sections connection flanges and transformation platforms

this book offers a practical and accessible guide to mechanics material science and design engineering using real world accident cases to illustrate key principles it examines past accidents involving bolted joints exploring mechanical failures root causes and corrective measures it also covers essential topics including mechanical analysis initial tightening techniques and fundamental design methodologies followed by advanced discussions on strength design under axial bending transverse and torsional loads additional chapters address loosening mechanisms prevention strategies and threaded joint applications in pipe fittings along with insights into delayed fracture mechanisms fretting fatigue countermeasures and emerging fastening technologies the book also provides an overview of international screw fastening standards including iso jis and vdi 2230
