the book sets out deliberately to challenge the current construction improvement debate and the way in which it is conducted it confronts the supposedly neutral nature of construction best practice and demonstrates that that the advocated recipes seldom stand up to critical scrutiny it further argues that commonly accepted components of best practice such as lean construction partnering and collaborative working rarely live up to the claims made on their behalf such recipes invariably suffer from definitional vagueness and are constantly reinterpreted to suit the needs the different audiences making sense of construction improvement argues that construction sector improvement techniques cannot be understood in terms of their substantive content and are best understood in terms of the rhetoric within which they are presented the author also contends that the persuasiveness of such recipes depends upon the extent to which practitioners can adopt them for the purposes of making sense of the changes they observe happening around them to be accepted as best practice construction improvement techniques must also resonate with broader agendas of socio technological change the author charts how the best practice debate has developed from the aftermath of the second world war through to the election of david cameron s coalition government in 2010 attention is given to the way in which the improvement debate throughout the 1960s and 70s was shaped by the broader aspirations of the post war social consensus and the associated desire for a centrally planned economy attention thereafter is given to the way the construction sector was radically re shaped by the advent of the enterprise culture the privatisation of the sector s client base coupled with the withdrawal of the state as a provider of mass housing caused a significant and long lasting shift in the construction landscape private sector clients similarly experienced extensive downsizing while outsourcing their procurement

capabilities such strategies were frequently justified by mobilising the rhetoric of business process re engineering bpr contracting firms simultaneously faced unpredictable workloads and increasing market competition in response the sector at large chose to base their competitive advantage on leanness and agility hence the emergence of the hollowed out firm as the dominant form of organising these structural trends combined to provide the backcloth to the industry improvement agenda throughout the 1980s and 1990s making sense of construction improvement argues that the popularity of improvement recipes such as partnering collaborative working and integrated teams can be understood as strategies for overcoming the loss of control associated with downsizing and outsourcing in contrast to other textbooks making sense of construction improvement does not offer advice on how to manage construction projects more effectively the aim is rather to understand the forces which have shaped the construction sector improvement agenda over time

indian idealism is a philosophical tradition rooted in indian thought that emphasizes consciousness spirit or the self Ātman as the fundamental reality of existence rather than the material world it contrasts with materialism and posits that mind or spirit is primary and the external world is either dependent on or illusory compared to this inner reality core idea reality is fundamentally spiritual or mental consciousness not material ultimate reality the true self Ātman or universal consciousness brahman is the only real existence world as illusion the material world is transient illusory or dependent on consciousness māyā concept key schools advaita vedanta non dualism Ātman brahman world is illusion buddhist yogācāra mind only objects don t exist independently of consciousness kashmir shaivism universe as manifestation of universal consciousness Śīva jainism emphasizes soul s consciousness and multiple viewpoints not purely idealist

the old civilisation of india was a concrete unity of many sided developments in art architecture literature religion morals and science so far as it was understood in those days but the most important achievement of indian thought was philosophy it was regarded as the goal of all the highest practical and theoretical activities and it indicated the point of unity amidst all the apparent diversities which the complex growth of culture over a vast area inhabited by different peoples produced it is not in the history of foreign invasions in the rise of independent kingdoms at different times in the empires of this or that great monarch that the unity of india is to be sought it is essentially one of spiritual aspirations and obedience to the law of the spirit which were regarded as superior to everything else and it has outlived all the political changes through which india passed the greeks the hunns the scythians the pathans and the moguls who occupied the land and controlled the political machinery never ruled the minds of the people for these political events were like hurricanes or the changes of season mere phenomena of a natural or physical order which never affected the spiritual integrity of hindu culture if after a passivity of some centuries india is again going to become creative it is mainly on account of this fundamental unity of her progress and civilisation and not for anything that she may borrow from other countries it is therefore indispensably necessary for all those who wish to appreciate the significance and potentialities of indian culture that they should properly understand the history of indian philosophical thought which is the nucleus round which all that is best and highest in india has grown much harm has already been done by the circulation of opinions that the culture and philosophy of india was dreamy and abstract it is therefore very necessary that indians as well as other peoples should become more and more acquainted with the true characteristics of the past history of indian thought and form a correct estimate of its special features
