the purpose of this book is to change thinking about crises and risk management is today both a great success an impressive achievement and a notable failure it works and it doesn't work it saves lives and property and it fails to save lives and property it helps and it hinders like all such management approaches this has a lot to do with how it is employed and practiced but in the case of risk management there is also a much more fundamental issue the risk management framework the risk management model is wrong many organisations today treat all risks as point events when the real risks involve systemic threats inherent in the global economy and the uncertain nature of global society the book argues that risk management has come a long way but that evidence of its more recent failure is now all around us and that it needs to now change dramatically if it is to accommodate current realities whilst there is a clear need for us all to manage risk through a crisis there is a lack of understanding of the nature of crises that is impeding progress as well as providing a conceptual basis for changing the way risk management is undertaken the book provides a blueprint for managing at organisational level through a global crisis and to a more limited extent at government and other levels how to prepare what to do when it's happening and how and when to emerge into the post crisis world
