an important reason for our western thought that the japanese have had no
independence in philosophy is our ignorance of the larger part of japanese and chinese
literature oriental speculation was moving in a direction so diverse from that of the west

that we are impressed more with the general similarity that prevails throughout it than with the evidences of individual differences greater knowledge would reveal these differences in our generalized knowledge we see the uniformity so strongly that we fail to discover the originality from chapter xvi american educator and missionary sidney lewis gulick 1860 1945 spent his life building a bridge between east and west during a period of immense confusion between the two diverse traditions during the more than 25 years he spent in japan as a teacher and lecturer in a variety of subjects including english and religion he learned as much about japanese society as he taught about western culture and midway through his sojourn in the slowly modernizing nation he wrote this forgotten classic of social science first published in 1903 evolution of the japanese is a startling clear eyed assessment of a foreign way of life yet one that evinces an atypical awareness on the writer s part of his own cultural assumptions about everything from the relative position of women and the habits of marital relationships to such traits of national character as cheerfulness industry jealousy and suspicion art and family intellectualism and morality religion and philosophy gulick discusses them all in this intriguing work one that reveals as much about the western mind at the turn of the 20th century as it does about the eastern

studies of brain evolution have moved rapidly in recent years building on the pioneering research of Harry Jerison this book provides reviews of primate including human brain evolution the book is divided into two sections the first gives new perspectives on the developmental physiological dietary and behavioural correlates of brain enlargement it has long been recognized however that brains do not merely enlarge globally as they evolve but that their cortical and internal organization also changes in a process known as reorganization species specific adaptations therefore have neurological substrates that depend on more than just overall brain size the second section explores these neurological underpinnings for the senses adaptations and cognitive abilities that are important for primates with a prologue by Stephen J Gould and an epilogue by Harry Jerison this is an important reference work for all those working on brain evolution in primates
