a wide range of real world examples illustrates the theoretical aspects of this tutorial introduction to digital mobile wireless networks in particular 2 5g and 3g packet switched systems are discussed in detail as are wireless lans and personal area networks many worked examples and homework exercises are provided and a solutions manual is available for instructors the book is an ideal text for electrical engineering and computer science students taking courses in wireless communications it will also be an invaluable reference for practicing engineers

advanced wireless communication systems a comprehensive guide bridges foundational principles with emerging paradigms to present a unified and in depth exploration of the technologies architectures and innovations shaping contemporary and next generation wireless networks opening with an overview of wireless technology evolution the book discusses global standards and regulatory frameworks for wireless networks while also systematically exploring wireless channel modelling simulation methodologies and a wide range of network architectures including cellular networks wi fi bluetooth zigbee lorawan and iot connectivity frameworks advanced physical layer and system level technologies such as mimo ofdm millimetre wave terahertz communication and free space optical systems are examined in detail along with critical security and privacy challenges in modern wireless networks later chapters focus on future facing innovations including massive mimo beamforming cognitive radio dynamic spectrum access and vehicular communication systems the book culminates with cutting edge topics such as machine learning driven network slicing latency optimisation for ultra reliable low latency communications urllc and noncoherent system design targeting 6g class applications key features comprehensive coverage from wireless communication fundamentals to cutting edge technologies an integrated perspective on wireless communication methods combining theory simulation methods and practical case studies dedicated chapters on ai enabled optimisation cognitive radio and urllc clear illustrations comparative analyses and real world application insights

this book presents the result of an innovative challenge to create a systematic literature overview driven by machine generated content this machine generated volume with chapter introductions by the human expert of summaries of the existing studies furthers our understanding of the optimization methods in mobile communication systems the book provides a machine generated comprehensive yet classified review of the optimization methods techniques and approaches associated with different mobile communications and systems including wavelet based cr ofdm systems mimo slot antenna with low mutual coupling for 5g networks etc it also covers mainly the techniques for performance analysis of mimo systems such as the hybrid filtering technique for mimo ofdm systems and artificial intelligence solutions beyond 5g radio access networks questions and related keywords were prepared for the machine to query discover collate and structure by artificial intelligence ai clustering the ai based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex interdisciplinary and multidisciplinary springer nature has published much on these topics in its journals over the years so the challenge was for the machine to identify

the most relevant content and present it in a structured way that the reader would find useful the automatically generated literature summaries in this book are intended as a springboard to further discoverability they are particularly useful to readers with limited time looking to learn more about the subject quickly and especially if they are new to the topics springer nature seeks to support anyone who needs a fast and effective start in their content discovery journey from the undergraduate student exploring interdisciplinary content to master or phd thesis developing research questions to the practitioner seeking support materials this book can serve as an inspiration to name a few examples it is important to us as a publisher to make advances in technology easily accessible to our authors and find new ways of ai based author services that allow human machine interaction to generate readable usable collated research content
