the unprecedented amount of data produced with high throughput experimentation forces biologists to employ mathematical representation and computation to glean meaningful information in systems level biology applying this approach to the underlying molecular mechanisms of tumorigenesis cancer research is enjoying a series of new discoveries and biological insights unique in its dualistic approach this book introduces the concepts and theories of systems biology and their applications in cancer research it presents basic cancer biology and cutting edge topics of cancer research for computational biologists alongside systems biology analysis tools for experimental biologists

presenting the main concepts this book leads students as well as advanced researchers from different disciplines to an understanding of current ideas in the complex field of comprehensive experimental investigation of biological objects analysis of data development of models simulation and hypothesis generation it provides readers with guidance on how a specific complex biological question may be tackled how to formulate questions that can be answered which experiments to perform where to find information in databases and on the internet what kinds of models are appropriate how to use simulation tools what can be learned from the comparison of experimental data and modeling results how to make testable predictions the authors demonstrate how mathematical concepts can illuminate the principles underlying biology at a genetic molecular cellular and even organism level and how to use mathematical tools for analysis and prediction

addressing the important subject of forensic dna analysis this title provides a concise

scientific overview of the field the author focuses on the two main areas of forensic analysis identification of biological evidence and forensic dna analysis

the 1997 european conference on spectroscopy of biological molecules ecsbm is the seventh in a biennial series of conferences devoted to the applications of molecular spectroscopy to biological molecules and related systems the interest of these conferences rests mainly on the relationship between the structure and physiological activity of biological molecules and related systems of which these molecular species form part this volume of ecsbm contains articles prepared by the invited lecturers and those making poster presentations at the seventh ecsbm the reader will find mainly applications of vibrational spectroscopy to protein structure and dynamics biomembranes molecular recognition nucleic acids and other biomolecules and biological systems containing specific chromophors biomedical applications of vibrational spectroscopy are expanding rapidly on the other hand a significant number of the papers describe applications of other methods such as nmr circular dichroism optical absorption and fluorescence x ray absorption and diffraction and other theoretical methods one aim has been to achieve a well balanced critically comparative review of recent progress in the field of biomolecular structure bonding and dynamics based on applications of the above spectroscopic methods a great part of the contributions included in this volume are devoted to biomedical and biotechnological applications and provide a broadly based account of recent applications in this field the content of this book has been organized in sections corresponding mainly to the different types of biological molecules investigated this book includes also another section related to theoretical methods where no calculations of vibrational frequencies dominate clearly the topic
