the longterm commitment of funds to assets with the expectation of generating a positive return over time Investors typically focus on fundamental analysis and seek to understand the underlying value of an asset Speculating on the other hand involves shortterm bets on the price movement of assets often with high risk and potential for quick gains or losses Speculators rely heavily on technical analysis and market trends Problem 12 The primary market is where new securities are initially issued to investors For example when a company issues shares for the first time through an Initial Public Offering IPO its a primary market transaction The secondary market is where existing securities are bought and sold between investors Stock exchanges like the New York Stock Exchange NYSE and NASDAQ are examples of secondary markets Problem 13 Financial intermediaries play a crucial role in facilitating the investment process They act as a bridge between investors and borrowers or issuers of securities Examples include Brokerage firms Facilitate the buying and selling of securities for investors Investment banks Underwrite new securities and provide advisory services to companies Mutual funds Pool money from multiple investors to invest in a diversified portfolio of assets Key Takeaways Investing involves longterm commitment while speculating focuses on shortterm price movements The because it helps investors Manage risk By spreading investments across different asset classes investors can reduce the overall risk of their portfolio Enhance returns Asset allocation allows for optimization of returns by aligning investments with market trends and investors risk appetite Control volatility By adjusting the asset allocation mix investors can control the level of volatility and fluctuations in their portfolio value Problem 23 Diversification is the practice of investing in a wide range of assets reducing the overall risk of the portfolio It operates on the principle that different asset classes tend to move independently of each other Benefits of diversification Reduces portfolio volatility By spreading risk diversification helps cushion the impact of adverse movements in individual assets Minimizes losses If one asset class performs poorly other assets may offset the losses 4 leading to a more stable overall portfolio Increases potential returns Diversification allows investors to benefit from the growth of multiple asset classes Key Takeaways Financial planning is a comprehensive plan for managing finances while an investment strategy focuses solely on investment decisions Asset allocation is the foundation of portfolio management balancing risk and return based on investor goals Diversification is essential for managing risk
