first published in 2004 zoos and animal rights would appear to be in conflict yet stephen bostock argues that this need not and should not be so examining the diverse ethical and technical issues involved including human cruelty human domination over animals outside their natural habitat and the nature of wild and domestic animals bostock analyzes areas in which misconceptions abound a timely and controversial book it explores the long history of zoos as well as current philosophical debates to argue for a controversial view of their role in the modern world anyone concerned with humanity s relationship with other animals and the natural world should find this a thought provoking book

this important two volume set unapologetically documents how capitalism results in the oppression of animals ranging from fish and chickens to dogs elephants and kangaroos as well as in environmental destruction vital resource depletion and climate change most traditional narratives portray humanity s use of other animals as natural and necessary for human social development and present the idea that capitalism is generally a positive force in the world but is this worldview accurate or just a convenient easy to accept way to ignore what is really happening a systematic oppression of animals that simultaneously results in environmental destruction and places insurmountable obstacles in the path to a sustainable and peaceful future david nibert s animal oppression and capitalism is a timely two volume set that calls into question the capitalist system at a point in human history when inequality and the imbalance in the distribution of wealth are growing domestically and internationally

expert contributors show why the oppression of animals particularly the use of other animals as food is increasingly being linked to unfavorable climate change and the depletion of fresh water and other vital resources readers will also learn about the tragic connections between the production of animal products and global hunger and expanded regional violence and warfare and they will understand how many common human health problems including heart attacks strokes and various forms of cancer develop as a result of consuming animal products

the papers presented in this volume range from proposals for new design approaches historical analysis of the relationship between the practice of landscape architecture and environmentalism to the theories of early practitioners of landscape architecture imbued by an environmentalist outlook the issues above are addressed through topics as eclectic as the design of american zoos the establishment of the tennessee valley authority road design and maintenance in texas and criticism of relationships between the words and works of select landscape architects this volume provides a fresh approach to encounters between environmentalism and landscape architecture by reframing the issues through self reflection instead of strategic debate

this is the first book to be devoted to the spectacular zoological discoveries and equally amazing rediscoveries of the twentieth century and it contains the only comprehensive collection of photographs of these species ever published it is a fascinating and encouraging book that provides good reason for believing that our world still holds many more surprises in store
