process that uses multiple sources to the delivery of guidelines to make decisions that include humans and machines the ras system is an integration of components such as data architecture with diverse data and a risk analytics process and modeling process to obtain knowledge and then determine actions through the new knowledge that was obtained the use of data analytics is not only connected to risk modeling and its implementation but also to the development of the actionable knowledge that can be represented by text in documents to define and share explicit knowledge and guidelines in the organization for strategy implementation this book moves from a review of data to the concepts of a ras it reviews ras system components required to support the creation of competitive advantage in organizations through risk analytics written for executives analytics professionals risk management professionals strategy professionals and postgraduate students this book shows a way to implement the analytics process to develop a risk management practice that creates an adaptive competitive advantage under uncertainty

some of schuyler s tried and true tips include the single point estimate is almost always wrong so that it is always better to express judgments as ranges a probability distribution completely expresses someone s judgment about the likelihood of values within the range we often need a single value cost or other assessment and the expected value mean of the distribution is the only unbiased predictor expected value is the probability weighted average and this statistical idea is the cornerstone of decision analysis some decisions are easy perhaps aided by quick decision tree calculations on the back of an envelope decision dilemmas typically involve risky outcomes many factors and the best alternatives having comparable value we only need analysis sufficient to confidently identify the best alternative as soon as you know what to do stop the analysis be alert to ways to beneficially change project risks we can often eliminate avoid transfer or mitigate threats in some way get to know the people who make their living helping managers sidestep risk they include insurance agents partners turnkey contractors accountants trainers and safety personnel

this study is a preliminary attempt to explore secondary impacts of highway projects by relating conceptual premises with empirical investigations the rationale arises from the legal imperatives of both the council on environmental quality guidelines and necessities of accounting for long range consequences of present projects what the present document intends to do is to provide some preliminary definitions and in a systematic approach delineate an approach to secondary indirect or induced effects a variety of approaches could help indicate the range of questions on secondary effects as well as the procedures that may contribute to a better understanding of the long range ramifications of highway improvements the underlying preoccupation of the document is outlining the conditions that make forecasting of alternative futures both possible and plausible
